

Chapter 7: Labeling Features
7A

These labels were accessed by right clicking on label features, under southeastern states layer.

Font changed from 12 to 7 and color to 30% gray.

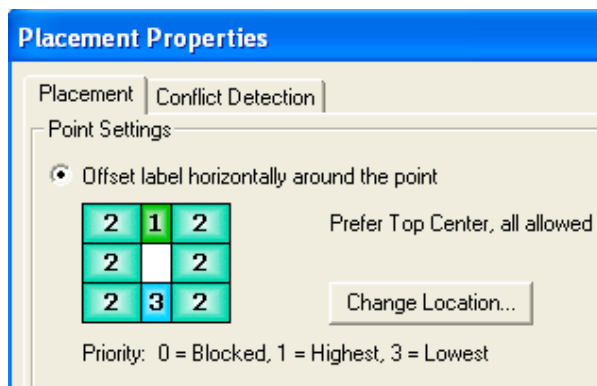

You can see we have added “Gulf of Mexico” changed to dark blue with size 12 font.

Also have added the names of the ruins from the ruins label.

7B

This dialog box was necessary to get the label to display over the top middle of the feature.

No River names.

When zoomed in Rivers have their name displayed. The name also bends to match the rivers bends.

7C

We see that the names of the regions have been moved for better visibility. This was done by using convert labels to annotations so they could be manually moved to where visibility would be better.
